

About Page — Complete Component Guide

A deep-dive into the **About** page of GenomelQ — the project's identity card, author credit, and disclaimer. For each component this document covers:

-  **What it is** (plain-language description)
-  **What it tells you** (how to read the output)
-  **How it works under the hood** (the algorithm)
-  **How to use it** (the user flow)
-  **Practical tips** (when it's useful, when to be cautious)

Page Layout Overview

The About page is a **max-3xl-wide** centered column with three vertical cards: the project description (with stats), the author credit, and a research-use disclaimer.

1. Project Description Card

What it is

The largest card on the page — provides a complete overview of GenomelQ in three regions:

1. **Header row:** GenomelQ logo (gradient pill) + name + tagline.
2. **Description paragraph:** explains the methodology in two sentences.
3. **Feature list:** bullet points of every major feature in the app.
4. **Stats grid:** four highlighted KPIs.

What it tells you

The text in the description introduces the project's purpose:

"GenomeIQ analyses DNA sequences for disease-associated gene markers using a TF-IDF + ensemble (Random Forest + calibrated Linear SVM + Logistic Regression) classifier. The pipeline includes group-aware K-fold cross-validation, sliding-window data augmentation, calibrated probabilities and saliency-based interpretation."

The bullet list enumerates **everything the app can do**, in stable order (predict, saliency, OOD, similarity, mutation, batch, circular plot, PDF, transformer, Copilot).

The 4-tile stats grid at the bottom shows the **key project KPIs**:

Tile	Value	Meaning
CV Macro F1	0.96 ± 0.02	Cross-validated performance
k-mer / n-gram	k=6 · 4-grams	Configuration of the TF-IDF tokenizer
Train samples	22,848	Total balanced training set after augmentation
Classes	4	Cancer · Diabetes · Alzheimers · Normal

How it works under the hood

This card is **static HTML** — the values aren't fetched from the server. They're hard-coded into [frontend/index.html](#).

That's an intentional design choice: the About page should reflect the **project's design parameters**, not runtime model state. If you change the architecture or retrain with different hyperparameters, you'd update the About page text by editing the HTML.

How to use it

This card is **read-only**. Use it as:

- A **reference card** when explaining the project to others.
- A **screen to share** during a defense — the panel often wants to see "what is this project, in a nutshell?"

Practical tips

- The **stats grid** is the single best place in the app to show project credibility at a glance.
- For a screen-recording demo, **scroll to this card and pause for 5 seconds** so the audience can read the KPIs.

2. Author Credit Card

What it is

A separate card highlighting the project's author — **MD Naimur Rashid**.

What it tells you

Element	Meaning
Avatar circle (gradient)	Brand-purple gradient with initials "MN" — a placeholder until you add a photo.
"Created by" label	Small uppercase label above the name.
Author name	"MD Naimur Rashid" in bold.
Subtitle	"DNA Disease Classifier · AI/ML capstone project" — context for the project.

How it works under the hood

Static HTML. The avatar is a CSS gradient with text initials — no image file, no asset pipeline.

If you want to replace it with a real photo, swap:

```
<div class="w-12 h-12 rounded-full bg-gradient-to-br from-brand-500 to-purple-500 grid place-items-center text-white font-bold text-lg shrink-0">MN</div>
```

with:

```

```

...and drop a 256×256 PNG at `frontend/static/avatar.png`.

How to use it

This card is the **author signature** for the project. It serves as:

- An **identity statement** when sharing the GitHub repo or a demo link.
- A **credit acknowledgment** during academic submissions.

Practical tips

- The same author info is repeated in:
 - The **README.md** footer (signed badge + name).
 - The **PDF report** metadata + footer (so any generated report carries your name).
 - The **Presentation page** title and closing slides.
- Update once in all four places if your name or role changes.

3. Disclaimer Card (Amber)

What it is

A small amber-tinted card at the bottom of the page with a **research-use-only disclaimer**.

What it tells you

Verbatim:

Disclaimer. *GenomeIQ is a research preview only. The predictions, similarity scores and mutation analyses are derived from a finite training corpus and should not be used for clinical decision-making.*

How it works under the hood

Tailwind classes give it the amber background (`bg-amber-50` light, `bg-amber-500/10` dark) plus border to make it visually distinct from the other neutral cards.

How to use it

This card is **legally and ethically important**:

- It tells users the project's intended scope.
- It protects you from liability concerns in academic and demo settings.
- It prevents the audience from confusing GenomeIQ with a clinical product.

Practical tips

- The same disclaimer appears in the:
 - **PDF report footer** (so every exported document carries the warning).
 - **README.md** Disclaimer section.
 - **User Manual** "Limitations" section.
- **Always include this disclaimer** when sharing the project publicly or running a demo. It's a standard best-practice in academic ML projects.

The About Page Flow (End-to-End)

```
User clicks "[i] About" in sidebar
      ↓
Alpine sets page = 'about'
      ↓
Section becomes visible
      ↓
Static HTML renders instantly
```

Total time: **instant**, no network calls.

Cheat Sheet — When to Show This Page

Scenario	What to show
Project defense / committee meeting	Project description card → Author card
First demo to non-technical person	Description + KPI stats grid
Sharing a screen recording	Scroll past all three cards as the closing scene
Submitting to GitHub	Match the README.md exactly so message is consistent

Personalizing the About Page

To make this page yours:

1. **Change author info:** edit the "MD Naimur Rashid" block in `frontend/index.html`. Update name, role, and avatar initials. Optionally replace the gradient avatar with a photo.
2. **Update KPIs:** edit the 4-tile grid values to reflect your latest training run.
3. **Tweak the description:** rewrite the paragraph if you change the methodology.
4. **Save and reload** the browser — changes appear immediately.

To keep all the references in sync, also update:

- `README.md` — author footer, results section
- `DOCS.md` — methodology section, results section
- `src/api/report.py` — the PDF builder uses your name in metadata + footer

Related Documents

- `README.md` — high-level project overview, mirrors the description text
- `DOCS.md` — comprehensive technical documentation, expands the description into chapters
- `Guide/PRESENTATION_PAGE_GUIDE.md` — the presentation deck retells this in slide form
- `Guide/USER_MANUAL_PAGE_GUIDE.md` — in-app help that lists the same features in walkthrough form

Part of the GenomelQ per-page documentation series.
